POLARIZED LENSES

Polarized lenses reduce the effects of glare by reflected light. No matter if you are on snow or water, polarized lenses give you the freedom to enjoy your life outdoors. Contrasts and colours appear more intense. Visual clarity and comfort are increased.

SHARPER CONTRASTS

BRILLIANT COLOURS

REDUCED EFFECTS OF GLARE

MORE ACTION

WING SYSTEM

The patented WING system combines two temple elements in one frame. By moving a small slider on the temple, a second hidden metal wire extends out and wraps around the ear.

The second temple provides secure fit grip during high-level sports activities. Through its curly form, the flexible wire securely hugs the ear. In the same way as it extends, the wire slides back until it completely disappears inside the temple again – without once removing the frame from the head. The innovative WING system is specially developed for high movement sports and tested by leading Red Bull Athletes around the globe.

FLOW STYLES

Endurance sports are demanding in every aspect.
So why not add some comfort?

By detaching the lens from the lower frame, a free-floating lens effect is created, our patented FLOW system. The elastic characteristics of the frame allow the lens to freely move up and down while being exposed to movement or shocks. Combined with adjustable rubber nose pads and temple tips, a robust and lightweight TR90 frame and an open frame design for perfect airflow, these glasses are made for performance.

DIRT

MX / DH
DESIGNED TO

PROTECT

STANDARD LENS

PANO TECH
15% INCREASED VISION

FOR ULTIMATE PANO VISION

The missing link when it comes to high performance cylindrical lenses. The LINK double lenses are **laminated** together and offer a **panoramic** field of vision by skipping the additional foam layer that creates the airspace.

No reflections, no distortions, no refractions.

In combination with a thin frame design it offers an up to 15% increased field of vision by avoiding the „tunnel view“ that results with thick frames that have the lens sit far away from the face.

No fogging. The Ultra-AF inner lens withstands fogging over 180 seconds and exceeds the required standards of 30 seconds by factor 6.
