MX / DH
DESIGNED TO

PROTECT

STANDARD LENS

PANO TECH
15% INCREASED VISION

FOR ULTIMATE PANO VISION

The missing link when it comes to high performance cylindrical lenses. The LINK double lenses are **laminated** together and offer a **panoramic** field of vision by skipping the additional foam layer that creates the airspace.

No reflections, no distortions, no refractions.

In combination with a thin frame design it offers an up to 15% increased field of vision by avoiding the „tunnel view“ that results with thick frames that have the lens sit far away from the face.

No fogging. The Ultra-AF inner lens withstands fogging over 180 seconds and exceeds the required standards of 30 seconds by factor 6.
